

Previously on IA368 II

ROS2

Hands-On

Again, we tried really, **really** hard some kind of hands-on, but it didn't work again, so let's try...

 ROS2

Hands-On but holding hands

Just watch the class, copy from
Code Share, paste and execute ;)

 ROS2

How to “launch” several ROS 2 scripts ?

- You can execute a `ros2 run <...>` in each terminal (interested in multiple terminals in one window ? Try [Terminator](#))
- You can create a launch file (intermediate level of difficulty):

<https://docs.ros.org/en/foxy/Tutorials/Intermediate/Launch/Launch-Main.html>

- You can use your creativity, a.k.a, use Linux/Windows tools, such as shell scripts, [tmux](#), [screen](#), docker. Example:

```
tmux new -d -s <session-name> <your-command>
```

```
tmux new -d -s turtlesim turtle_teleop_key
```

Thank You...

...for your attention
